My AI Workforce

PRACTICAL AI GUIDE

Create a Social Media Scheduling Agent

⏱ 2–3 hours 📊 Beginner–Intermediate

Tools covered: n8n or Make, LinkedIn API or Buffer, optional ChatGPT

What You'll Build

An automated social media pipeline that generates content based on your content pillars, formats posts for each platform, and schedules them for optimal times — all without you opening a social media app.

Step 1: Define Your Content Pillars

Content pillars are the 3–5 recurring themes you post about. They give your audience consistency and make content creation systematic.

Example pillars for an AI company:

1. **Education** — "Did you know AI can do X?" posts
2. **Social proof** — Client wins, case studies, testimonials
3. **Thought leadership** — Opinions on industry trends
4. **Behind the scenes** — How you work, team updates
5. **Offers** — Promotions, new products, lead magnets

Aim for a 70/20/10 mix: 70% educational/entertaining, 20% social proof, 10% promotional.

Step 2: Create a Content Calendar Template

Build a simple weekly content calendar in Google Sheets or Airtable:

DAY	PLATFORM	PILLAR	TOPIC	STATUS	SCHEDULED TIME
Mon	LinkedIn	Education	AI email agents	Draft	8:00am
Tue	Twitter/X	Thought leadership	AI trends 2025	Scheduled	12:00pm
Wed	LinkedIn	Social proof	Client win	Draft	8:00am
Thu	Twitter/X	Education	How-to tip	Draft	5:00pm
Fri	LinkedIn	Behind scenes	Friday insight	Draft	9:00am

Step 3: Set Up AI Content Generation

Using Make (formerly Integromat)

1. **Trigger:** Google Sheets — Watch for new rows with Status = "Generate"
2. **AI Module:** OpenAI — Send prompt:

```
Write a LinkedIn post about "[Topic]" for a [Pillar] post.
Tone: professional but conversational.
Length: 150-200 words.
Include 3 relevant hashtags.
No emojis unless they add genuine value.
```

3. **Update Sheet:** Write generated post back to the "Content" column
4. **Notify:** Send Slack/Discord message: "Post drafted for review: [Topic]"

Using n8n

1. **Schedule trigger** — Monday 7am
2. **Read Airtable** — Fetch this week's content plan
3. **Loop** — For each row
4. **OpenAI node** — Generate content based on topic + pillar
5. **Write back** — Update Airtable with draft
6. **Discord notification** — "7 posts drafted for this week. Review at [link]"

Step 4: Connect LinkedIn and Twitter APIs

LinkedIn

1. Go to LinkedIn Developer Portal
2. Create an app → Request "Share on LinkedIn" permission
3. Generate OAuth token (Buffer or Hootsuite can handle this without code)
4. In Make/n8n, use the LinkedIn module with your token

Twitter/X API

1. Apply at developer.twitter.com
2. Create a project and app
3. Get API Key, API Secret, Access Token, Access Token Secret
4. Use the Twitter module in Make or n8n

Easier alternative: Use Buffer or Hootsuite as the posting layer. Both have native integrations with Make and n8n, and handle OAuth complexity for you.

Step 5: Optimal Posting Times

Research-backed best times (adjust for your audience timezone):

PLATFORM	BEST DAYS	BEST TIMES
LinkedIn	Tue–Thu	8am, 12pm, 5pm
Twitter/X	Mon–Fri	9am, 3pm, 6pm
Instagram	Tue, Wed	11am, 2pm
Facebook	Wed, Thu	1pm, 3pm

Your scheduling agent should post at these times automatically after you approve drafts.

Step 6: The Review + Approve Workflow

Don't post without reviewing. The workflow should be:

1. **Monday morning:** Agent generates 5–7 draft posts → sends to your Discord/Slack
2. **Monday morning:** You review in 15 minutes, edit if needed, mark approved
3. **Monday–Friday:** Agent posts at scheduled times automatically
4. **Friday:** Agent sends weekly performance report (impressions, clicks, engagement)

Advanced: Repurposing Content

Set up a second workflow that takes your best-performing posts and repurposes them:

- LinkedIn long-form → Twitter thread
- Blog post → 5 LinkedIn tips
- Video transcript → LinkedIn carousel outline

This multiplies your output without extra creative work.

Expected Results

- LinkedIn: 10–30% organic reach growth per month
- Twitter: 50–200 new followers per month
- Consistent brand presence without daily effort
